

What is claimed is:

1. A method for correlating a subscriber unit to a physical port in a point to multipoint wire line network comprising:
 - (a) prompting an installer to manually input a location code associated with the subscriber;
 - (b) receiving the location code in the subscriber unit;
 - (c) transmitting the location code via the network to a central repository ; and
 - (d) storing the location code in the central repository toward associating the location code with the physical port.
2. The method of Claim 1 further comprising:
 - (d1) checking the location code for errors before storing;
 - (d2) upon finding an error, transmitting an instruction to the subscriber unit to indicate error to the installer; and
 - (d3) upon finding no errors, storing the location code.
3. The method of Claim 2 further comprising prompting the installer to reinput the location code.
4. The method of Claim 1 further comprising:
 - (c1) transmitting the site code; and
 - (d1) storing the site code in the central repository.
